

AI

AI can do the work, or it can do the learning

Only one of those is a problem, and it is not always obvious which one just happened.

DEFINITION

The productive part

In most tasks there is a step that is slow, awkward and generative.

That step is where the learning lives. Almost everything around it is admin.

Handed off safely vs handed off badly

SAFELY

formatting, first drafts
you can judge,
summaries of what
you already read.

BADLY

any part you could not
tell was wrong if it
were wrong.

Same task, two outcomes

Essay

outline it together

helps

Essay

write it for me

hollow

Code

explain this error

helps

Code

fix it silently

hollow

Math

check my steps

helps

Three questions before you paste the prompt

1

Which part am I skipping?

2

Could I tell if the answer were wrong?

3

Will I need to do this unaided later?

Convenience is not the test

“

The test is whether you could do it again tomorrow without the tool. If not, you did not outsource the work, you outsourced the ability.

Use it on the admin, keep the hard part

That is the whole rule, and it is harder to follow than it sounds.
